

DIPALI HAMBARDE

+91-9404426239 — dipalihambarde71@gmail.com — linkedin.com/in/dipalihambarde — github.com/dipali80 — Pune, Maharashtra

Summary

strong foundation in Python, FastAPI, Data Analysis, Machine Learning, and Deep Learning. Skilled in building ML models using Supervised and Unsupervised Learning, NLP, CNN, RNN, ANN, and Transformers. Currently expanding into Generative AI with hands-on learning in LangChain — including Prompts, Chains, Vector DB, RAG, Fine-tuning, Document Splitters, and Document Loaders. Proficient in SQL, Python, FASTAPI, EDA, and building real-world Python projects. Quick learner with a passion for AI development and solving practical problems through technology.

Skills

Python Libraries: OOP, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow

Machine Learning & AI: Supervised Learning, Unsupervised Learning, NLP, Deep Learning, RNN, CNN, ANN, Transformers Encoder only, Decoder only, LLMs, Model Tuning, fine-tuning, RAG, Cross Validation, EDA, Hyperparameter Tuning, API Integration

Gen AI /Langchain: Models, Prompts, Chains, Agents, Runnable, OutputParsers, Semantic Search, Document Loaders, Document Splitters, Embeddings, vector DB

SQL: Joins, Subqueries, Group By, Window Functions, CTEs

Data Analysis: Excel, Power BI, Statistics, Inferential Statistics, Hypothesis Testing, Type I Error, Type II Error

Projects

CUSTOMER BEHAVIOUR ANALYSIS | *Python, SQL, Power BI, DAX*

- Analysed behaviour of **4,000+ customers** to identify trends and revenue patterns across categories, seasons, locations, review ratings, and discounts — applying EDA and predictive modelling techniques.
- Engineered 10+ custom DAX measures (Avg Purchase Amount, Review Rating, Segment Revenue) and built a 9-visual interactive Power BI dashboard for real-time stakeholder decision-making.
- Identified 14% revenue shortfall in the South region; co-developed a targeted marketing recovery plan — communicated findings through structured data storytelling to drive business strategy.

HUMAN EMOTIONS PREDICTION — | *Python, NLP, Scikit-learn, NLTK*

- Developed an NLP model to automatically detect human emotions (Sadness, Anger, Love, Joy, Fear) — highly useful for businesses to classify thousands of customer reviews by emotion automatically instead of reading manually one by one.
- Applied preprocessing — stopword removal, punctuation and emoji cleaning using NLTK and trained Logistic Regression with TF-IDF as best model using 80/20 train-test split.

AIRLINE RESERVATION SYSTEM | *SQL, PL/SQL, Relational Database Design*

- Engineered a normalised relational database managing flights, passengers, bookings, payments, and crew with optimised indexing and referential integrity constraints.
- Developed SQL and PL/SQL stored procedures and triggers to automate availability checks and revenue tracking — reducing manual processing by 3–4 hours daily.

HOSTEL MANAGEMENT SYSTEM | *Core Python, OOP, JSON*

- Developed a Hostel Management System using Core Python and OOP to automate student registration, room allocation, and record management — improving operational efficiency by 70%.
- Enabled students to raise complaints using ID and room number, helping staff track and resolve issues faster, improving overall productivity.

Education

Bachelor of Computer Applications (BCA)

Swami Ramanand Teerth Marathwada University, Nanded

Graduated: 2025

CGPA: 8.56 / 10

Certifications

Data Science — FirstBit Solutions

Power BI for Data Analysts — Microsoft Learn

SQL for Data Analysis — Project-Based Learning
